

Hemorrhoids - Signs And Treatment

Hemorrhoids (piles) are irritated and inflamed veins situated in the anus. If the piles are permanently affected, such as in chronic constipation, they increase and therefore are gradually pushed out of the anus. There are many people who faced the same problem as I saw it. And one common issue we have in common is that this is problem that we feel embarrassed with. Sad to say, there are not many effective solutions out there in the market that may truly live up to their claims on successfully healing hemorrhoids. There are a couple of products which may be effective, but will probably burn a hole in your finances.

- So what exactly is hemorrhoids or piles?
- What are the symptoms attached to it?
- To put it simply, hemorrhoids is really a lump that hangs outside the rectum.
- This particular lump is usually as a result of over-straining while moving bowels, or in some cases with women, after their particular pregnancy.
- There can be some other causes, but these two are the most common.

Hemorrhoids can be Easily Detected Without the Need for a Doctor, or Hospital Visit

Most common symptoms of an internal hemorrhoid is bright red blood as part of your bar stool. You can see this particular on the toilet paper or within the toilet bowl. Other signs and symptoms could include minor rectal discomfort and/or a feeling of feeling full or bloated.

- During a medical examination with regard to hemorrhoids, the patient must lie down so that rectum can be easily reached by the doctor.
- Sometimes he asks the parties to be able to lay down on the side and legs (Sims' position).
- Or, the patient lies on his back as well as places his legs right as well as left.
- There is also a scenario, where the patient kneels on the examination table and stretches the buttocks in the air (knee-elbow position?).
- It is important that the posture is relaxed, so that the whole experience is not also unpleasant for the patient.
- Next, the doctor will feel and check the anal region.
- First, the physician inspects the colon commencing from the outside.

He will be looking for like signs as inflammation, skin irritation, tearing and greatly **enlarged hemorrhoids**. Most doctors may also work with an endoscope, to be able to start to see the digestive tract, and inspect for any irregularities such as lumps or even scarring. If the doctor can make no particular diagnosis, then one can also get a detailed endoscopic examination, which calls for an empty the **bowel**. This will obviously require a day or maybe two of going on a fast where the patient often takes before a laxative, or, if an enema.

- For an endoscopy, the doctor are able to use various tools, depending on what he wants to see.
- Usually, they will use a proctoscope for the front areas of the rectum.
- The device is a tube with a handle, 6-15 cm long.
- The opening of the front is beveled, sometimes located in the middle of a small window.
- Through the tube, the physician can push a lamp and other devices.

This Allows a Proctoscope to Extract Tissue Samples or Deserted Hemorrhoids

If this type of proctoscopy and rectoscopy provide no cause for the symptoms, the doctor may do a sigmoidoscopy. In this method he is able to see the bottom of the big intestine by introducing a flexible endoscope. The doctor enters a colonoscopy within the bowel, looking at the entire large intestine for the transition into the small intestine. This is done by way of a flexible hose, which sits at the head of a smaller camera. Extra tests might exclude fungi and allergy symptoms, as well as other possible infections. Remember, Hemorrhoids may be at worst relieved and possibly cured altogether.

“ There are many treatment options available, most of which only provide short term pain relief from the above symptoms but immediate attention must be made to your food intake and or diet plus an exercise campaign and this must be kept up with at all times because once you get rid of your hemorrhoids you do not want them to return. Always look for a natural solution and always take steps to prevent them happening in the first place.

Apart from surgery, a **natural hemorrhoid cure** that acts as an anti-inflammatory has been proven to be most successful over time to take care of, cure and get rid of hemorrhoids once and for all. What this does is to naturally calm, soothe and reduce the strained and swollen veins back to normal size thus minimizing the pain, soreness and irritation.

Hemorrhoids (Piles) are Inflamed and Painful Veins Operating Out of the Particular Anus

If the piles are permanently affected, such as in persistent constipation, these people increase and so are gradually pushed out of the anal sphincter. There are many people who faced the same problem as I had. And one common issue we have in common is that this is one problem that we feel embarrassed with. Sad to say, there aren't many effective solutions out there in the market that can really live up to their claims on effectively curing hemorrhoids. There are a couple of products which may be effective, but will likely burn a hole in your wallet.

- So what exactly is hemorrhoids or piles?
- What are the signs and symptoms attached to it?
- To put it simply, hemorrhoids is a lump that hangs outside the rectum.
- This lump is often because of over-straining while passing bowels, or in some cases with women, after their being pregnant.
- There can be some other causes, but these two tend to be the most common.

“ **Foods to Avoid Because they Cause Hemorrhoid** Hemorrhoids are cysts that originated from swelling veins in the rectum region, often acquired both genetically or due to specific factors such as getting chronic constipation, aging, being pregnant or poor diet. There are instances where...

Hemorrhoids can be Easily Detected Without the Need for a Doctor, or Hospital Visit
